

Medik8 Skin Needling (Medical Grade) After Care Instructions

PROFESSIONAL STRENGTH TREATMENTS

Client Information

Name: _____ Date: ____ / ____ / ____

Treatment Location: _____

Medical Practitioner: _____

Contact Telephone: _____

Treatment Information

Immediately after treatment

- If a topical layer of retinol and/or Hydr8 B5 serum was applied after the skin needling procedure, it must be kept overnight and washed off the next morning. In this case, use clean warm water only and pat face dry gently with a clean soft towel.
- Unless otherwise directed by your physician, the use of cleansers or topical products should be avoided for at least 36 hours post treatment. Antiseptic washes, creams and/or prophylactic antibiotics may be prescribed by your physician.

After the skin has healed

- Make-up may be used when the skin is completely healed (wait 48 hours post procedure). Using make-up on broken skin poses a certain risk of hyperpigmentation as a result of infiltration of makeup into the open tissue, as well as the risk of potential bacterial infection and inflammation in the treatment area.
- AHA and BHAs can be used to soften and superficially resurface the epidermis but only after the skin has totally recovered from the skin needling procedure.
- A normal skincare regimen can be resumed once the skin has completely healed.

Recommended skincare in between needling sessions

- It is highly recommended to use the Personal Medik8 Titanium Dermaroller alongside daily application of topical vitamin C and A serums for the acceleration of regenerative processes and consolidation of procedure results. Follow the directions of your physician.
- Compatible Medik8 products: Personal Medik8 Titanium Dermaroller (0.2mm and 0.3mm); C-Tetra, CE-Tetra, Retinol 3TR, Retinol 40 Boost (premixed with Hydr8 Night), Retinol Eye TR and treatment specific body products.
